Professional Development Courses

Perth – Sunday 22nd & Monday 23rd May 2016

Functional Release Cupping – Sunday 22nd May

This unique method of treatment incorporates vacuum cupping therapy, the 'Anatomy Trains' concept and functional movement patterns to make dramatic changes in sporting, occupational and other functional movements. This dynamic approach to cupping is highly individualised to the patient's own movement deficits and through its holistic approach, not only improves range of motion, but also reduces the risk of injury both locally and distally along kinetic chains.

Sports Dry Needling Master Class – Monday 23rd May

This one day workshop equips participants with the ability to make clinically reasoned decisions about the use and integration of dry needling interventions in the management of sports injuries. A range of conditions will be explored, with directions for assessment and treatment including a variety of manual and exercise therapy options. The use of dry needling for each clinical presentation will be evaluated and validated based on current research and evidence based practice. This workshop will involve a considerable practical component and only participants with prior education in dry needling should attend.
